/note="Vector: pDNR-Dual; Site_1: loxP-SalI; Site_2:
loxP-HindIII; Clones from this library have been
PCR amplified using gene-specific primers to contain the
complete open reading frame (based on known gene sequences
available from NCBI's RefSeq!. Template for PCR is cDNA
derived from either pooled cytoplasmic polyA RNA: from 30
cells lines or pooled total RNA from 10 different tissues
(from BD Biosciences/Clontech and Washington University).
PCR products are directionally cloned into the loxP sites
of the pDNR-Dual vector. Library constructed by Dr.
Narayan Bhat, Earl Bere III and Hongling Liao (Gene
Expression Laboratory, Research Technology Program, SAIC
Frederick, NCI-Frederick, Frederick, M2 1702). For

                                   AAZ21481 to AAZ21495 represent fragments of the human sensory neurone specific 2a (SNS-2a) nucleotide sequence. SNS-2a is a sodium channel protein. SNS-2a can be used in a method for the identification of a modulator of a sodium channel, and for assaying for compounds which modulate sodium flux. The sodium channel modulators can be used in a
                                                                                                                                                                                                                                                                                                                                                                  Sensory neurone specific 2a; SNS-2a; sodium channel protein; pain; voltage gated; hypersensitivity; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      멍
                                                                                    The present sequence encodes a type 5 sodium channel protein designated PNS. The protein is a sodium ion channel of the nervous system, and is highly expressed in plexiform and dorsal root ganglia. The protein can be used to identify inhibitors of sodium channel proteins that are resistant to tetrodotoxin (TTX). The inhibitors are potentially useful for treating epilepsy, stroke, diabetic neuropathy, traumatic injuries, AIDS-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Type 5 sodium channel; PN5; nervous system; plexiform; dorsal root ganglia; tetrodotoxin; TTX; epilepsy; stroke; diabetic neuropathy; traumatic injury; AIDS-related neuropathy; neuropathic pain; migraine; headache; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
                                                                                         This is the nucleotide sequence of a partial cDNA clone which codes for a comparison (see AAY06596) of human NaN, a previously unidentified voltage cc gated sodium channel protein that is preferentially expressed in dorsal croot ganglia (DRG) or trigeminal ganglia, and which produces a TTX-R cc sodium current. The NaN channel cDNA was obtained from human DRG tissue cDNA by PCR amplification (see also AAX87620-22). Rat, mouse and human cc NaN nucleic acids (see AAX8760-02) and polypeptides (see AAX06596-98) cc are provided. The invention also includes expression vectors and cc transformed host cells, methods for identifying tissues and cells that cc express NaN, methods for identifying agents that modulate NaN channel cc express NaN, methods for identifying agents that modulate NaN channel cc express NaN, methods for identifying agents that modulate nan amethod for using such agents to treat acute or chronic pain, paraesthesia and cc hyperexcitability phenomena. The preferential expression of NaN in cc sensory DRG and trigeminal neurons provides a target for selectively modifying the behaviour of these nerve cells while not affecting other crowd cells in the brain and spinal cord. The gene is named SCN11a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                    subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial hyperglycaemia, QT extending syndrome type 3 and motor endplate diseases. The present cDNA sequence encodes the human SCN12A-s sodium channel
                                                                                                                                                                                                                                                                                                                                                                         Sodium channel alpha subunits SCN12A and SCN8A of human nervous s together with splicing variants, useful in studying physiological mechanism relating to excitatory cells and in drug development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; gene; ss; sodium channel subunit; SCN12A; SCN12A-s; SCN8A; human nervous system; chromosome 3p23-21.3; excitatory cell; drug development; familial hyperglycaemia; OT extending syndrome type
                                                                                                                                                                                                The invention comprises the amino acid and coding sequence of three sodium channel subunits from the human nervous system (SCN12A, SCN12A-and SCN8A). The SCN12A/SCN12A-s gene is found on chromosome 3p23-21.3 the SCN8A gene is found on chromosome 12q13.1. The sodium ion channel

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                            The present sequence is that of cDNA encoding a novel human tetrodotoxin cresistant sodium channel, termed NaN (see ABE0121). The cDNA was considered from a human dorsal root ganglia tissue cDNA library by PCR amplification (see also ABF20122-2). NaN belongs to the a-subunit courrent. Such channels underlie the generation and propagation of current. Such channels underlie the generation and propagation of cimpulses in excitable cells such as neurons and muscle fibres.

CC preferential expression of NaN on sensory neurons innervating the body concerns, makes it a very useful target for diagnostic and/or therapeutic uses in relation to acute and/or chronic pain pathologies. A claimed comethod of treating pain, paraesthesia and/or hyperexcitability phenomena in a human or animal subject involves administering an agent that alters sodium current flow through NaN channels, or which modulates tringeninal neurons. NaN nucleic acids are used in gene therapy to correct disorders associated with decreased sodium channel expression or candinatense to down-regulate NaN expression, in the diagnosis of disease, and in the recombinant production of NaN polypeptides

                   The present invention describes an expression vector comprising a nucleic card sequence that encodes a mammalian Na v 1.9 sodium channel protein or cits fragment, and producing a sodium current when transfected in a cell. Riso described: (1) a recombinant cell comprising the plasmid selected comprising the plasmid selected comprising the plasmid selected comprising the plasmid described above; (2) a method of making a cell or cell line that produces a Na v 1.9 codium channel-dependent sodium current by: (a) providing a cell that has seen transfected with the expression vector; and (b) culturing the cell cunder conditions that allow expression of Na v 1.9 sodium channel protein compression that allow expression of Na v 1.9 sodium channel protein compression to produce a sodium current into the transfected cell; (3) a method of composing the cell or cell line produced by the method to the agent; and (c) exposing the cell or cell line produced by the method to the agent; and comprising the expression vector. The agent, where an cell acceptable of modulating sodium current is indicative of an agent comprising the expression vector. The expression vectors are useful for the stable cloning and expression of the Na v 1.9 sodium channel at the mRNA and protein levels, and for producing sodium channel at currents in dorsal root ganglion neurons. The comprising compression of the Na v 1.9 sodium channel at currents are useful channel sequence encodes a human Na v 1.9 sodium channel protein, which compression the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Expression vector useful for stable cloning and expression of Nav1.9 sodium channel at the mRNA and protein levels comprises a nucleic acsequence that encodes a mammalian Nav1.9 sodium channel protein or it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gonda MA,

                                                                                                                                                          The invention comprises the amino acid and coding sequence of three sodium channel subunits from the human nervous system (SCN12A, SCN12A-s and SCN8A). The SCN12A/SCN12A-s gene is found on chromosome 3p23-21.3 and the SCN8A gene is found on chromosome 12q13.1. The sodium ion channel subunit proteins are useful in studying physiological mechanisms relating to excitatory cells and in drug development. The sodium ion channel subunit proteins are useful for treating diseases such as familial hyperglycaemia, QT extending syndrome type 3 and motor endplate diseases. The present cDNA sequence encodes the human SCN12A sodium channel subunit
                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sodium channel alpha subunits SCN12A and SCN8A of human nervous system together with splicing variants, useful in studying physiological mechanism relating to excitatory cells and in drug development.

                                                                                                                                                                                                                                                                                                                                                                                               CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) cyroteins and polynucleotides may be used in the prevention, diagnostis and creatment of diseases associated with inappropriate (I) expression. For creatment of diseases associated with inappropriate (I) expression. For creatment of diseases associated with inappropriate (I) expression. For creatment of diseases associated with inappropriate (I) expression. For creatment in the prevention, diagnosis and creatment the patients of the deletions or deletions in a patient's genome created that affect the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) created a host cell and culturing the cell to express the created (I) proteins and polynucleotides may be used to prevent, (I) proteins and polynucleotides may be used to prevent, (I) created and cancer metastases of haematopoietic diseases, especially concers and cancer metastases of haematopoietic derived cells. AAK64703 created to a prevent the present human immune/haematopoietic antigen genomic created represent invention. AAK54942 to AAK54950 and AAM82169 creates.
                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC and AKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic cactivity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the CC protein. (I) proteins and polynucleotides may be used to prove the cell to express the CC cancers and cancer metastases of haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK54942 to AAK64950 and AAM82169 CC represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (1) CC amino acid sequences given in AAM82170 to AAM91921. (1) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (1) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (1) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (1) by expressing inactive proteins or to CC supplement the patients own production of (1). Additionally, (1) CC encleic acids into a host cell and culturing the cell to express the CC protein. (1) proteins and polynucleotides may be used to prevent, CC diagnose and treat immune/haematopoietic ediseases, especially CC cancers and cancer metastases of haematopoietic diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169 CC represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I amino acid sequences given in AAM82170 to AAM91921. (I) have cytostati activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased

Additionally, (I) polymicleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polymucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87647 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               17-JAN-2001;

(HUMA-) HUMAN GENOME SCI INC

Ç, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 36478; 3071pp + Sequence Listing; English.

CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic CC activity, and can be used in gene therapy and vaccine production. (I) CC proteins and polynucleotides may be used in the prevention, diagnosis and CC treatment of diseases associated with inappropriate (I) expression. For CC example, they may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of (I) by expressing inactive proteins or to CC supplement the patients own production of (I). Additionally, (I) CC polynucleotides may be used to produce the secreted (I), by inserting the CC nucleic acids into a host cell and culturing the cell to express the CC diagnose and treat immune/haematopoietic-related diseases, especially CC cancers and cancer metastases of haematopoietic antigen genomic to AAK67694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK34942 to AAK64903 and AAM82169 corresponded to the present incoming the production of the control of the represent sequences used in the exemplification of the present invention
